

# Economy & Energy Efficiency with Meiko's Ecostar Dishwashers

Whilst Meiko's Ecostar 430, 530 and 545D glass and dishwashing machines are full of 'technology', the bottom line is, these machines deliver spotless, sparkling results in an energy efficient, economical manner.

Reliability – a basic requirement of these machines – is delivered alongside water-savings, reduced detergent usage, long-lasting equipment and easy user operation.

The under-counter 430 and 530 and the 545D pass-through warewashers feature the Eco-filter system that guarantees optimum filtration of the wash water by keeping the wash tank water cleaner, in turn reducing detergent consumption, lowering operating time and ensuring a higher standard of wash quality.

Also included as standard is the new fully electronic control system MIKE 1 with integrated infrared technology – a means of capturing, recording and analysing machine data.

Ease of operation is made easier with the new digital temperature display for wash and final rinse temperatures along with, two and three wash programme cycles on the 530F and 545D respectively, and integral rinse aid and dosing units.

All models feature soft start operation preventing jerky jostling and powerful upper and lower wash and rinse systems. Importantly, the machines are double skinned and insulated, keeping the heat inside rather than leaking into the kitchen area.

Also available as optional with the pass-through warewasher is the AirBox AktivAir exhaust treatment system – a simple means of controlling exhaust extraction at cleaning programme start up – no filter required, maintenance free, and can be retrofitted.
