

Meiko launching "Two Year" warranty on entry level ECO series machines

Demonstrating total confidence in its equipment and absolute commitment to delivering end user added value, Meiko UK is announcing at Hotelympia that the established ECO series range of undercounter and hood-type machines is to be provided with a standard "Two Year" manufacturer's warranty!

"Hotelympia provides the ideal opportunity for visitors to compare not only the prices offered by other comparable German manufacturers on their market entry level machines, but also allows them to satisfy themselves that they are purchasing products with added value," says Bill Downie, Meiko UK Managing Director.

"I am sure visitors will find this two-year warranty offer provides them with the very best value for money. What's more, the offer is supported by award-winning after sales service and support from Meiko UK and our Partner Distributors – you just can't get better than that!"

The ECO series is Meiko's 'entry level' range of undercounter and hood-type glasswashers and dishwashers and it is provided as standard with features and accessories that other manufacturers deem to be optional. The ECO series offers outstanding reliability and wash results, combined with Meiko's German engineering quality that is renowned throughout the industry.

Also being introduced with the ECO series machines at Hotelympia is Meiko UK's unique and industry leading three (3) year **"No-Bills"** guarantee, which up till now has only been available with the Premium series machines.

"We have such confidence in the build quality of our ECO series that not only are we in a position to offer a standard two year warranty on the ECO product range, but can now also offer our customers a genuine three (3) year "**No-Bills**" option that guarantee's users of our products will not have to put their hands in their pockets for unplanned or non-budgeted breakdown support, spare parts or planned maintenance visits during the three (3) year period, and that is a pledge that I am delighted to put my name to," adds Downie.

In terms of technical support, Meiko UK have continued to raise the bar and offer service support levels and response times that competitors find hard to match.

The undercounter ECO 430 and 530 machines and the ECO 545D pass-through models all feature an Eco-filter system that ensures optimum filtration of the wash water by keeping the wash tank water cleaner, in turn reducing detergent consumption, lowering operating time and ensuring a higher standard of wash quality.

Ease of operation is assured with a digital temperature display for wash and final rinse temperatures along with two and three wash programme cycles on the 530 and 545 respectively. These two models can also be supplied with a built-in water softener, saving space and the requirement for extra services in the wash up area.

All models feature integral rinse aid and detergent dosing units, with the undercounter models also being provided with integral chemicals containers. A soft start feature on the wash pump motor assists in preventing breakage of high quality stemware, and the double wall construction and fully insulated hood on the ECO545 models keeps the heat inside the machine, rather than adding to the heat load of the surrounding wash-up space.

"In fact, the only option that we offer on the entire ECO series machines is a stand for the undercounter models that raises the door, when opened, to waist level, how many other manufacturers can tick that box?" – concludes Downie.
